Personal Profile

Bilingual Spanish and English software engineer with experience developing and maintaining full-stack applications using TypeScript, Node.js, Next.js and React. Experienced in frontend and backend development, PostgreSQL and SQL, troubleshooting production issues, automated testing, and deploying and maintaining live applications.

Experience

Catholic Events – Software Engineer

(Oct 2025 - Now)

- Developed and maintained a live full-stack web application using TypeScript, Node.js, Next.js and React, investigating and resolving production issues through application logs.
- Developed frontend and backend features, using GitHub, feature branches, code reviews, and preview environments.
- Integrated third-party services including AWS Rekognition for automated image and content safety checks, and PostHog for application analytics and user behaviour tracking.
- Implemented and maintained authentication workflows, user permissions, and application security features using NextAuth.
- Worked with SQL and PostgreSQL databases, managing schema changes and migrations across development, staging and production environments.
- Improved application reliability and performance by optimising dynamic loading, caching, and image compression.
- Worked with automated testing workflows to validate changes before merging and release, resolving discovered issues.

Freelance Web Developer

(Nov 2024 - Oct 2025)

- Delivered and deployed client websites using TypeScript, Node.js, Next.js and React, managing production configuration including environment variables, databases, domains, and DNS records.
- Configured hosting environments, deployed and integrated services like InPost and Stripe.
- Implemented authentication, user roles, and database functionality for client applications.
- Supported clients with website maintenance, security recommendations, and technical guidance.

Aethos Business Solutions Limited – Office Administrator

(May 2024 - Nov 2024)

- Provided first-line IT support, resolving user issues and documenting solutions for recurring problems.
- Supported employees remotely and in person by troubleshooting Windows, network connectivity, and hardware issues.
- Managed user accounts in Microsoft Admin Centre including password resets, mailbox access, and licence management.
- Assisted with office relocation by configuring workstations, reconnecting devices, and restoring user access.

Skills

- **Development:** Experience developing and maintaining full stack web applications using Next.js, React, Node.js, and TypeScript.
- **Databases:** Experience working with SQL and PostgreSQL, including database migrations, schema updates, and development, staging, and production environments.
- **Deployment & Infrastructure:** Experience deploying and configuring production applications through Vercel, including environment variables, DNS records, domains, SSL configuration, and hosting configuration.
- **Development Workflow:** Experience using Git and GitHub with feature branches, code reviews, automated testing, build validation, and preview deployments.
- **Authentication & Security:** Experience implementing authentication and role-based access control using NextAuth, alongside user permissions and general web security practices.
- **Troubleshooting & Performance:** Experience investigating production issues through application logs and user reports, with performance improvements including dynamic loading, caching, and image compression.
- **Languages:** Fluent in English and Spanish.

Education

City, University of London

(2019 - 2022)

- **BSc Computer Science: 2:1**
- **Relevant Modules:** Web Development & Databases – Designed relational databases and worked with SQL in web development.
